SkillfullyAware Awareness Quotient (SAAQ)

Subject: **Anonymous1**

Report Date: September 01, 2025

What this is

SAAQ is a whole-person snapshot of how you relate to yourself, others, and the world—right now. It is practical, strengths-forward, and action-oriented. You'll see clear language about patterns, levers for growth, and a 90-day plan to turn insight into skill.

This report integrates narrative data to produce a developmental snapshot that is practical, compassionate, and actionable. It synthesizes three lenses: a ten-stage developmental continuum (S1–S10), eight Power Centers of lived capability, and six Core Aptitudes. All insights are individualized to Anonymous's narrative responses and oriented toward near-term practice and long-term growth.

The Developmental Stage Model (S1–S10)

SAAQ uses a simplified ten-stage continuum (S1–S10) to describe how adults make sense of self, others, and systems. Stages are not labels but lenses; people can access multiple stages depending on context and stress. We estimate a current center-of-gravity and note common fallback patterns under load.

Our stage model is an original synthesis of respected developmental traditions: Piaget's cognitive stages; Loevinger/Cook-Greuter's ego development; Kegan's subject-object theory; Graves/Spiral Dynamics (Beck & Cowan); Wilber's Integral framework; and O'Fallon/Barta's STAGES. We translate common insights across these maps into a single, plain-English progression labeled S1 → S10. In short: as perspective widens, identity becomes less defensive, more self-authored, more systemic, and—at later stages—more spacious and compassionate. SAAQ estimates your current "center of gravity" and the next workable edge.

Other lenses we use

- **Hemispheric Perspective** (inspired by Iain McGilchrist): left (analytic/sequencing) ↔️ right (relational/holistic) balance.
- **Power Centers**: Vital, Emotional, Relational, Social/Leadership, Financial, Creative, Intellectual, Spiritual.
- **Core Aptitudes**: Autonomy/Influence, Drive, Perseverance, Achievement, Alignment, Restraint.
- **Trait Tendencies** (qualitative): We infer personality tendencies from narrative (aligned with research such as HEXACO) to deepen the picture, while avoiding use of any copyrighted instruments.

How to use this report

- Start with the Stage Estimate and Awareness Summary for the big picture.
- Study Power Centers and Shadow Indicators to locate energy leaks and why they happen.
- Use the 90-Day Practice Plan and If-Then Protocols to build repeatable habits.
- Share the v2 Targeted Lenses with your therapist/coach to focus sessions quickly.

---

1. Developmental Stage Estimate: S6 → S7 (Results Driver toward Perspective Connector)

Evidence of S6 (Results Driver):

- Strong ownership and bias for action; frames setbacks as learning and moves forward.
- Strategic focus and willingness to prioritize (e.g., 'say no to the wrong opportunities').
- Results orientation (e.g., accepts 80–85% 'good vs complete' as situationally effective).

Evidence of S7 (Perspective Connector) emerging and stabilizing:

- Explicit commitment to the 'space between input and emotion'—choosing response over reactivity.
- Values win-win ethics, forgiveness, and perspective-taking (e.g., reframing father relationship; fair dealings in business).
- Seeks multiple viewpoints (travel, diverse media, EO forums) and enjoys learning with others.

Fallbacks under stress:

- Control reflex and over-driving (e.g., golf performance drops when trying to control everything).
- Numbing or avoidance habits (e.g., evening beers; skipping morning practices when overloaded).

Verdict: Anonymous's center-of-gravity is S6 with consistent S7 capacities. Consolidation in S7 will come from widening the window between impulse and action in health routines, and authorizing others without rescuing.

2. Hemispheric Bias: Left-tilted Integrator (right-hemisphere cultivation in progress)

Patterns suggest a functional left-hemisphere tilt—planning, driving outcomes, “satisficing” at 80–85%, and analytical learning—with growing right-hemisphere strength in relational presence, forgiveness, value-driven judgment, and somatic noticing. Under pressure, left-dominant control can overrun felt-sense guidance; performance improves when he relaxes control and 'lets it fly' (golf as laboratory). Practices that restore whole-brain balance: breath-paced starts, embodied check-ins before email, and placing connection/value before speed.

3. Power Center Analysis

Anonymous’s energy and agency are broadly distributed. Financial, Social/Leadership, Intellectual, and Relational centers are strong. Vital and Emotional are improving but still carry cost under load. Creative and Spiritual are active, expressed through business design, learning, travel, and service.

Power Center	Assessment	Notes (from narrative)
Vital (Physical/Sexual)	Developing → Stabilizing	Morning routine is inconsistent; beer/eating used under stress; major weight loss and strength gains signal upward momentum.
Emotional	Maturing	Uses 'space between input and emotion'; counts to 10; clarity drops when impulses (beer/skip workout) win the first 5 seconds.
Relational	Strong	Win-win ethic; forgiveness of father; seeks understanding when disappointed; will distance if patterns persist.
Social/Leadership	Strong	Seen as leader/driver; learning to be 'passenger' to empower others; founding/organizing in AI venture.
Financial	Strong/Healthy	Positive, abundant framing; saves to protect family; spends for experiences; freedom orientation.
Creative	Active	Business design, strategic planning, AI venture creation; enjoys pushing boundaries and learning.

Intellectual	Strong	Reads widely; samples divergent viewpoints; seeks perspective-stretching conversations.
Spiritual	Values-Driven	Nature-based, service-oriented spirituality; 'be a good human'; aligns judgment with compassion.

Power Center KPIs (90-Day Targets)

Gentle, measurable rhythms to stabilize gains without over-controlling. Targets are designed to fit a founder schedule.

Power Center	Simple KPI	Baseline (est.)	90-Day Target
Vital	Protected morning block	Often skipped when overloaded	4 days/week: first 60–90 min before email
Emotional	Regulation reps	Ad hoc (count to 10)	10 micro-pauses/week (name feeling + 3 breaths)
Relational	Repair or deepen	Responsive, not always proactive	1 proactive appreciation/repair/week
Social/Leadership	Delegate/authorize	Learning to be 'passenger'	2 tasks/week delegated with clear outcomes
Financial	Values-aligned spend	Healthy habits	1 intentional experience/month with family/friends
Creative	Design sprint	Ongoing, informal	1 × 90-min focus block/week (AI/strategy)
Intellectual	Perspective stretch	High volume reading	1 long-form deep dive/week + 1 contrasting source
Spiritual	Service touch	Informal kindness	1 conscious act of service/week (no credit taken)

4. Core Aptitudes

Assessment reflects observed patterns in Anonymous's narratives.

Aptitude	Assessment	Evidence
Autonomy/Influence	Strong (data gap on one prompt)	Frequently mobilizes peers; valued as leader/driver; prefers win-win. No direct narrative for 'influence

		without authority' due to form error; pattern inferred from leadership roles and forum work.
Drive	High	Bias for action; 'I do not take I can't do it for an answer'; pushes and adjusts; startup execution.
Perseverance	High	Worked through major career and family challenges; reframes setbacks as learning; maintains momentum.
Achievement	High, Satisficing-lean	Operates at 80–85% 'good vs complete'; speeds outcomes while accepting some trade-offs.
Alignment	Strong	Ethical 'win-win' stance; forgiveness practice; values-consistent choices even when costly.
Restraint	Selective, Improving	Counts to ten; holds back as mentor/parent; impulse drift shows up in evening habits and morning routines.

5. Shadow Indicators (root ↔️ antidote)

Anonymous's narratives reveal recurring stress-loops that can undermine growth if left unattended. These patterns cluster around four root dynamics, each with specific expressions and antidotes.

1. **Root fear ➔ loss of control / diminished performance.**

    - ***Expression***: Control Reflex ➔ over-managing when afraid; golf and work performance drop when gripping too tightly.
    - ***Antidote***: Somatic safety cues (grounding, breath pacing, softening grip); accept 80% plan, refine later; practice trusting "let it happen."

2. **Root shame ➔ "I'm weak if I need rest or help."**

    - ***Expression***: "Satisficer" Risk ➔ pushing outcomes at 80–85%, avoiding the vulnerability of slowing down or asking for support.

- ***Antidote***: Reframe rest as performance fuel; self-permission practices ("Strong leaders recover well"); designate one deliverable each week to finish at 100%.

3. **Root anger ➔ frustration at others' disengagement.**

   - ***Expression***: Lone Rescuer ➔ over-functioning for others; resentment when peers or partners don't engage.
   - ***Antidote***: Boundaries plus clear contracts; offer choice + consequence, then step back; practice relational patience.

4. **Root avoidance ➔ numbing under overload.**

   - ***Expression***: Quick Relief Loop ➔ alcohol, food, skipped routines when stressed.
   - ***Antidote***: 5-second swap: tea/water + movement; recommit to first-hour morning practice; install micro-rituals that interrupt avoidance spirals.

Somatic Signature Panel

- **Early warnings**: rushed tempo, adrenaline buzz, shallow breath, sleep score drifting into 60–70s.
- **Green lights**: relaxed grip, playful focus (as on best golf days), sleep score 85–90+, steady morning routine.
- **Reset protocols**:
  1) Two-minute box-breathing before opening email.
  2) 'Grip check'—soften hands/jaw/eyes; notice feet.
  3) One sentence intention: 'Let it happen; respond, don't control.'

6. Awareness Quotient Summary

Anonymous shows a solid S6 center with real S7 altitude—self-responsible, learning-oriented, values-anchored, and increasingly relational. He recognizes his levers (sleep, exercise, morning routine) and the first-seconds window where habit wins or loses. When he relaxes control and honors pacing, performance and connection rise.

HEXACO Trait tendencies (qualitative, narrative inference):

- **Honesty-Humility**: High — strong fairness/'win-win', declines advantage when others are leveraged.
- **Emotionality**: Moderate — generally calm with tools; spikes under overload (sleep score drop, impulses).
- **Extraversion**: High — enjoys leading, speaking, mobilizing.
- **Agreeableness**: High — patient, reframes disappointment, forgives, prefers harmony.

- **Conscientiousness**: High but Satisficing — executes consistently; accepts 80–85% when speed matters.
- **Openness to Experience**: High — travel, diverse inputs, strategic design, AI exploration.

7. Personalized Recommendations & 90-Day Practice Plan

Theme: Grip less, ground more. Make mornings sacred; authorize others; finish one thing to excellence each week.

A. Weekly cadence (anchors)

- Four protected morning starts (60–90 min: movement + reflection before email).
- Two deliberate delegations (clear outcome + check-in cadence).
- One relationship deposit (appreciation, repair, or generosity).
- One 90-minute design sprint (AI/strategy) in deep work mode.

B. Daily minimums (the floor)

- 5 minutes breath + intention before work.
- 10 minutes movement (walk/mobility) before screen.
- 1 glass of water before any alcohol
- 3 nights/week alcohol-free.

C. Five SkillfullyAware Practices

- Focus on the Positive → Name one win before work.
- Prime Ahead → Set a one-sentence purpose for the next meeting.
- Name it to Tame it → Label the feeling; take three breaths.
- Shift / Open / Stay → When triggered: shift attention, open awareness, stay 90 seconds.
- Zooming → Daily/Weekly review: What worked? What to iterate next week?

D. If-Then Protocols

- If evening drink is tempting → Then swap to tea/sparkling water and do 10 air squats.
- If control reflex appears (golf/work) → Then 'soft hands' cue + exhale twice as long as inhale.
- If a teammate stalls → Then offer two clear options with consequences; choose and step back.

E. Agreements & Boundaries

- Mornings belong to health and focus; email waits.
- Say 'no' to opportunities misaligned with the year's top three priorities.
- In forums and teams, prefer consent-based commitments over rescue.

F. Milestones (by Day 90)

- ≥ 40 protected mornings completed.
- ≥ 24 delegated outcomes moved without rescue.

- Sleep score average ≥ 82 for last 14 days.
- One '100% excellence' deliverable per week (documented).

G. Reflection prompts (weekly)

- Where did I loosen my grip and perform better?
- What did I delegate that stayed delegated?
- What lit me up this week—and how can I double it?

Therapist Handoff Page (Clinician Summary) Client: **Anonymous1**

Stage: S6 Results Driver with consistent S7 Perspective Connector capacities. Falls back to control reflex and short-term soothing under load.

Hemispheric Tilt: Left-tilted integrator. Strength in planning, execution, and analytical drive. Right-hemisphere presence (somatic sensing, relational forgiveness, relaxed attention) improves outcomes—especially in golf and leadership contexts. Integration work should support fluid switching between hemispheres rather than over-reliance on control.

Somatic Profile:

- *Stress signs*: rushed tempo, shallow breath, adrenaline buzz, sleep score dips into 60–70s, tendency to skip morning self-care.
- *Green lights*: playful grip, relaxed attention, sleep scores 85–90+, steady routines.
- *Reset levers*: breath regulation, embodied grounding, humor, and shifting from outcome-fixation to process orientation.

Strengths:

- Strong ownership and learning orientation; reframes setbacks as growth.
- Leadership presence; trusted as driver and organizer.
- Fairness and ethical orientation; prefers win-win solutions.
- Forgiveness capacity (notably with father); demonstrates emotional maturity.
- Intellectual curiosity; seeks out diverse perspectives and continuous learning.

Risks:

- Over-control in high-stakes contexts; performance drops when trying to micromanage.
- Reliance on alcohol/eating as quick relief under stress.
- Satisficing at 80–85% may conceal quality gaps in complex domains.
- Over-functioning and rescuing others; frustration when peers underperform.
- Oscillation between high drive and avoidance (skipped routines, numbing).

Clinical Interventions:

- Somatic regulation practices (breath pacing, grounding, body awareness).
- Scaffold morning routines as anchor habits; track adherence.
- Boundary and authorization coaching: stepping back, resisting rescue reflex.

- “Finish to Excellence” reps: choose one deliverable per week to complete at 100%.
- Harm reduction with alcohol: replace quick-relief reflex with embodied resets.

Appendix: SAAQ Ten-Stage Awareness Model (S1–S10)

S1. Reactive Self
Acts from immediate impulses and desires; regulation is minimal. Conflict often resolved through force or avoidance. ***Practice***: Pause and breathe before acting; notice consequences.

S2. Boundary Pusher
Pushes limits, tests authority, and experiments with control. Rules seen as external impositions. ***Practice***: Create clear agreements with consistent consequences.

S3. Tribal Belonger
Identity fused with group, family, tribe, or ideology. Belonging provides stability but can constrain individuality. ***Practice***: Differentiate kindly; recognize self as distinct while maintaining connection.

S4. Loyal Belonger
Oriented around duty, structure, and fulfilling socially defined roles. Seeks order, predictability, and compliance with norms. ***Practice***: Treat errors as data, not moral failings; cultivate flexibility.

S5. Skilled Specialist
Focused on precision, expertise, and mastery of systems. Can become rigid, perfectionistic, or overly analytical. ***Practice***: Share tools generously; invite others’ perspectives; loosen grip on control.

S6. Results Driver
Results-oriented, pragmatic, and strategic. Capable of prioritizing, scaling, and leading toward measurable goals. Risk of over-drive and burnout. ***Practice***: Balance productivity with renewal; build empathy into execution.

S7. Perspective Connector
Holds multiple perspectives; values relationships, empathy, and dialogue. Prioritizes win-win solutions and ethical action. ***Practice***: Strengthen boundaries while staying open; practice dialogue over debate.

S8. Systems Architect
Designs systems from core values; integrates multiple perspectives into coherent strategy. Self-authored identity; vision-driven leadership. ***Practice***: Distribute authority; embed values into organizational design.

S9. Integrative Seer
Sees both self and systems as constructed; able to hold paradox and ambiguity without collapse. Operates with humility and meta-awareness. ***Practice***: Consciously choose constraints; cultivate presence over resolution.

S10. Meta-Builder
Synthesizes paradigms into new, generative wholes. Works at ecosystem level, co-creating transformative structures. Operates from transpersonal perspective.
Practice: Convene across systems; co-create shared futures; anchor in service.
